SUMMARY

Data-driven professional with a background in programming, predictive analytics, and health sciences. Experienced in data analysis, software development, machine learning, and AI development through hands-on projects, research, healthcare work. Skilled in Python, R, and SQL and transforming real-world datasets into actionable insights, particularly in healthcare and social impact domains.

EDUCATION

British Columbia Institute of Technology

Sept 2023 – May 2025

- Diploma (With Distinction) – Computer Systems Technology, Predictive Analytics

Simon Fraser University

Sept 2016 – Apr 2022

- Bachelor of Science - Health Sciences, Life Sciences

SKILLS

- Languages:** Python, R, C, C++, PHP, SQL, Java, HTML, CSS, JavaScript, EJS
- Frameworks & Libraries:** Node.js, Express.js, React, Laravel, Flask, Bootstrap
- Databases:** MySQL, MongoDB, Firebase, BigQuery
- Tools:** Advanced Excel, Tableau, Git, Figma, Trello, Jupyter, Microsoft Office Suite
- Data skills:** ETL, Data Cleaning, Data Visualization, Statistical Analysis
- Libraries:** NumPy, Pandas, Tidyverse, Scikit-learn, TensorFlow, PyTorch, Hugging Face,
- Certificates:** Google Data Analytics, Learn R Course (Codecademy), Learning R (LinkedIn)

WORK EXPERIENCE

Data Analyst, TELUS International AI Data Solutions

Aug 2023 – Jan 2024

- Verified digital map content through research to support data accuracy for millions of users
- Evaluated geographic and online data across various task types to ensure relevance
- Contributed to AI development by ensuring data aligned with project guidelines

Data Analyst/Researcher, Pivot 2020

Oct – Dec 2020

- Gathered data on Canadian cities through research methods (indexes, surveys, and interviews) to develop a youth-focused, accessible data hub
- Analyzed primary data on Canadian cities using Google Sheets, generating data reports
- Delivered a presentation on Metro Vancouver's tourist attractions to support local tourism

PROJECTS

Job Scam Detector – Flask AI Web App | [App Link](#)

Mar – Apr 2025

- Developed a web app using a model trained on 17,880 job postings to detect fraudulent jobs
- Evaluated MLPClassifier, logistic regression, random forest, and Naïve Bayes models using 5-fold cross-validation and selected the best model by F1 score
- Applied NLP techniques such as n-gram extraction to improve detection accuracy

Pathway Analysis: Relationship Status Impact on Happiness | [Link](#)

Mar 2021 – Nov 2023

- Conducted mediation analysis in R to examine factors influencing the association of relationship status and happiness during COVID-19
- Presented research findings at the Canadian Human Connection conference, highlighting implications for improving happiness during the pandemic

VanML Data Science Hackathon - Winner 2023 | [LinkedIn Link](#)

Sept 2023

- Analyzed 454,508 BC Helpline call records to identify concerns pre- and post-COVID-19
- Created correlation plots in R to explore the relationship between BC Helpline calls and COVID-19 cases and emphasize potential correlation factors
- Presented data analysis insights to suggest implications for future crisis planning
